

# WALK AUDIT CHECKLIST

## Purpose

A structured evaluation tool to assess how walkable, safe, and accessible a location is for pedestrians.

---

## 1. Sidewalk Quality

- Sidewalk surface smooth and free of cracks
  - No obstructions (poles, trees, encroachment, parked vehicles)
  - Enough width for two people to walk comfortably
  - Clearly separated from roadway
- 

## 2. Crosswalks

- Crosswalks clearly visible and marked
  - Ramps present at crossings
  - Median refuge for wide roads
  - Crossing aligns with pedestrian curb cuts
- 

## 3. Safety & Security

- Street lighting works at night
  - Pedestrian signals operational
  - Sufficient crossing time available
  - Speed of vehicles safe for pedestrians
  - CCTV or police presence where appropriate
- 

## 4. Accessibility

- Wheelchair users can move barrier-free
- Ramps available with proper slope
- Tactile paving installed where required
- No unexpected steps or level changes

---

## **5. Connectivity**

- Path connects important locations (markets, homes, transit, institutions)
- No unnecessary detours
- Continuity maintained without breaks
